New GPRS/GSM Voice & Data PC Card For Mobile Devices

With the rapidly increasing demand for Mobile Computing and Wireless Network devices, Unique Micro Design (UMD) has released the new Option Globetrotter GPRS (General Packet Radio System) PC card (PCMCIA). GPRS/GSM is the next generation of Mobile digital network. Vodafone is the first of the main Telcos to provide the 'Globetrotter' with network approval for its GPRS/GSM network. The 'Globetrotter' will allow you to be 'always on' to the Internet without time charges, as you only pay for the data used. Key features include tri-band operation (which means it can operate world wide), support for 5 and 3 volts systems, (many new devices use 3 volts), SMS messaging, has a built-in petite but robust and retractable antenna, external antenna connection socket, plus the ability to make a Mobile Voice GSM phone call via the external earpiece. The 'Globetrotter' is supplied in a retail package with speaker/earpiece, protective cover, CD with Windows drivers and user manual.

-More-

For the business world the implications of this technology are profound, with such devices personnel can communicate and administrate their business in the field at reduced costs and improved operational efficiencies. GPRS will decrease the incremental cost to provide data services, an occurrence that will, in turn, increase the penetration of data services among consumer and business users. The ‘Globetrotter’ will empower your notebooks and handheld devices. Unique Micro Design (UMD) is an ‘Engineering IT solutions’ Australian company that has been part of the IT industry since 1983 and supplies innovative products, services, consultancy and distributes brand name peripherals. ###
